

CAVENDISH PENSION SERVICES LTD

SCHEME ADMINISTRATION · REGULATORY DELIVERY

Dashboards and Disclosure Control Requirements

Connection, matching, value data and statutory illustrations. Derived control requirements and acceptance criteria for the administration platform, ahead of the 31 October 2026 connection deadline.

ILLUSTRATIVE EXAMPLE — NOT AN OFFICIAL TEXT

This document is an **authored illustrative example**, produced to demonstrate automated requirement generation and test design. Cavendish Pension Services Ltd is a fictional administrator. The document control block, ownership, reference numbers and revision history are invented.

It is **not** a copy, extract or reproduction of any official regulatory text, actuarial standard or code of practice, and it is not legal, actuarial or compliance advice. Citations are given so that the reader can consult the official source directly. Regulatory positions stated here were compiled on 25 September 2026 and are not maintained.

Do not rely on this document for any compliance purpose.

Document reference	CPS-CR-2026-007
Version	4.2
Status	Approved — under change control until connection
Classification	Internal — Controlled
Document owner	Director of Scheme Administration
Technical owner	Head of Platform Engineering
Effective from	1 September 2026
Next scheduled review	30 November 2026, and on announcement of the Dashboards Available Point
Applies to	The find, match and view services; the value data calculation engine; the statutory illustration engine; scheme record keeping and the data quality regime

1. Purpose and scope

This document sets out the control requirements that the administration platform must satisfy across three regimes that overlap in practice: the dashboards connection obligations, the statutory money purchase illustration standard, and the governance and record-keeping expectations of the General Code.

They overlap because the same member record feeds all three. A money purchase projection shown on a dashboard and the projection shown on that member's annual illustration are produced from the same arithmetic; a value that differs between the two is a defect in both regimes at once. Record quality that fails the General Code will surface as a matching failure or a missing value on a dashboard. The controls below are therefore written to be tested against one platform, not three.

In scope: the find request handler, the matching engine, the pension identifier register interface, the view request handlers for administrative, signpost and value data, the money purchase projection engine, the statutory illustration generator, and the scheme data quality and record retention functions.

Out of scope: transfer processing, the pensioner payroll, and the employer contribution collection service, each covered by its own extract.

Delivery deadline. The statutory connection deadline for in-scope schemes is **31 October 2026**, which at the compilation date of this document is thirty-six days away. Schemes with fewer than 100 relevant members are exempt and may connect voluntarily after that date.

The staged timetable published by the department is guidance that schemes must have regard to; it is not itself the deadline. Missing a staged date is not a breach. Missing 31 October 2026 is. The final staged cohort, schemes of 100 to 124 members, has a staged date of 30 September 2026.

2. Regulatory basis

Instrument	Citation	Status	Dates that govern delivery
Pensions Dashboards Regulations	SI 2022/1220, as amended by SI 2023/858; Northern Ireland equivalent SR 2022/296	In force	Statutory connection deadline 31 October 2026. Enabling power in Part 4 of the Pension Schemes Act 2021.
Dashboards rules for contract-based arrangements	FCA Handbook COBS 19.11	In force	Mirrors the trust-based regime for FCA-regulated personal and stakeholder providers.
Dashboards Available Point	SI 2022/1220 regulation 4	Not yet set	No date announced. Public availability expected in financial year 2027/28. The Secretary of State must give six months' notice.

Instrument	Citation	Status	Dates that govern delivery
Statutory money purchase illustrations	AS TM1 version 5.2, issued by the Financial Reporting Council	In force	Published 6 February 2026; effective for calculations performed on or after 6 April 2026. Version 5.1 applied from 6 April 2024.
Disclosure obligations behind the illustration	Pension Schemes Act 1993 section 113; Occupational and Personal Pension Schemes (Disclosure of Information) Regulations 2013, SI 2013/2734, regulation 17 and Schedule 6	In force	Illustration issued annually, within twelve months of the end of the scheme year.
General Code of Practice	The Pensions Regulator, made under sections 90 and 90A of the Pensions Act 2004	In force	In force 28 March 2024 in Great Britain, 5 July 2024 in Northern Ireland. Replaced ten previous codes.

Legal character of the Code. The General Code is not a statement of the law, and there is not usually a direct penalty for failing to follow it. Courts and tribunals must nonetheless take relevant provisions of the Code into account when determining whether a legal requirement has been met. Controls derived from the Code are therefore treated here as delivery standards rather than as statutory obligations, and are labelled accordingly.

3. What changed in version 5.2 of the illustration standard

The annual review concluded in February 2026 left every actuarial assumption unchanged. The only amendment was to wording concerning fund volatility calculation dates, made to clarify the existing policy intent. The accumulation rates in force are those introduced at version 5.1 and effective for calculations on or after 6 April 2024.

Volatility group	Annualised volatility	Accumulation rate in force	Superseded rate
Group 1	0 to 5 per cent	2 per cent a year	1 per cent a year
Group 2	5 to 10 per cent	4 per cent a year	3 per cent a year
Group 3	10 to 15 per cent	6 per cent a year	5 per cent a year
Group 4	Above 15 per cent	7 per cent a year	7 per cent a year, unchanged

Other prescribed assumptions relevant to the engine: inflation and earnings increases at 2.5 per cent a year compound; an annuity interest rate derived from the fifteen-year fixed-interest gilt yield index, fixed annually in February for the following financial year and rounded to the nearest 0.2 per cent; an annuity expense loading of 4 per cent of the annuity value at retirement; a default charge assumption of 1 per cent a year of the projected fund

where the actual charge is unknown; presentation in today's money; and output as an annual amount in whole pounds rounded down to three significant figures.

4. Control requirements — Part A: dashboards find, match and view

DB-01 Definite match creates a pension identifier

SI 2022/1220 regulation 23; COBS 19.11.12R

Where a find request matches a member record against the scheme's documented matching criteria, the platform must immediately create a pension identifier, register it in accordance with the technical standards, and record whether the match is definite or possible.

ACCEPTANCE CRITERIA

A find request carrying surname, date of birth and national insurance number matching exactly one member record produces a definite match, a registered pension identifier, and a stored match type of “definite”, within the same transaction. A partial failure that registers the identifier without storing the match type is a failure.

DB-02 Possible match classification

COBS 19.11.12R

A find request satisfying some but not all of the documented criteria must be classified as a possible match and flagged as such.

ACCEPTANCE CRITERIA

For each documented near-miss combination, the stored match type is “possible”. The same input must not produce a definite match on one run and a possible match on another; the classification is deterministic given the same record set and criteria version.

DB-03 Possible match returns limited data only

COBS 19.11.13R(2)

Where the match is possible rather than definite, only the permitted limited administrative data may be returned, accompanied by a message requiring the individual to contact the scheme.

ACCEPTANCE CRITERIA

The response payload for a possible match contains the permitted limited fields and nothing else. Value data must be absent. Full administrative data must be absent. The contact message must be present. Asserting on the payload rather than on the rendered screen is required, because a field suppressed only in presentation is still disclosed.

DB-04 Thirty-day expiry of an unresolved possible match

COBS 19.11.13R(5)

Where a possible match is not resolved within thirty days, the find request must be deleted and the pension identifier de-registered.

ACCEPTANCE CRITERIA

At day 29 the find request and the identifier still exist. At day 30 both are gone, with de-registration confirmed against the register. This period is expressed in

CALENDAR

days, unlike the value data limits in DB-07 and DB-08, which are expressed in working days. The boundary must be tested on both sides.

DB-05 No residual data after a no-match

Matching guidance; UK GDPR principles

A find request producing no match must leave no residual personal data.

ACCEPTANCE CRITERIA

After a no-match response, the submitted identity data is absent from the primary store, from any cache, and from application logs. A log line carrying the surname and date of birth of a non-matching enquirer is a failure of this control even where the database is clean.

DB-06 Administrative data response window

SI 2022/1220 regulation 24; COBS 19.11.16R

Administrative data must be returned immediately on a view request. For a member who joined less than three months before the request, it must be available no later than three months after the date of joining.

ACCEPTANCE CRITERIA

A view request for an established member returns administrative data within the immediate service level. For a member who joined 89 days ago, the data is either present or correctly deferred; at 91 days after joining it must be present.

DB-07 Money purchase value data within three working days

SI 2022/1220 regulation 26; COBS 19.11.29R(1)

Where money purchase value data must be calculated on demand, it must be provided within three working days.

ACCEPTANCE CRITERIA

A request raised at 16:00 on the Thursday before a Monday bank holiday is due at the end of the following Thursday, not the following Sunday. The working-day calendar must exclude weekends and the bank holidays applicable to the scheme's jurisdiction. Day three passes; day four fails.

DB-08 Defined benefit and hybrid value data within ten working days

SI 2022/1220 regulation 26; COBS 19.11.29R(2)

Value data for defined benefit, hybrid and all other benefit types must be provided within ten working days.

ACCEPTANCE CRITERIA

Day ten passes; day eleven fails. The same working-day calendar as DB-07 applies. A scheme holding both money purchase and defined benefit sections must apply three working days to the former and ten to the latter within a single response, not the longer limit to both.

DB-09 Reuse of an existing recent figure

COBS 19.11.28R

Value data may be served immediately where it is based on a statement issued within the last thirteen months or a calculation made within the last twelve months.

ACCEPTANCE CRITERIA

A figure from a statement dated thirteen months and one day ago is not served as immediate; it triggers recalculation within the applicable window under DB-07 or DB-08. A figure dated twelve months and twenty-nine days ago is served immediately. Both boundaries are tested.

DB-10 Matching criteria audit record

COBS 19.11.10R

The scheme's matching criteria, the considerations behind them, any changes made and the rationale for those changes must be retained for six years.

ACCEPTANCE CRITERIA

For any date in the preceding six years, the criteria in force on that date are retrievable together with the rationale recorded at the time. The record is immutable: an attempt to amend a historical entry is refused and itself recorded. A match decision made under a superseded criteria version resolves to that version, not to the current one.

DB-11 Signpost data

SI 2022/1220 regulation 25

Signpost data must be returned immediately alongside administrative data.

ACCEPTANCE CRITERIA

Every view response carrying administrative data also carries the signpost data, and each signpost location resolves rather than returning an error. A signpost pointing at a retired page is a failure.

DB-12 Operational reporting

SI 2022/1220 regulation 28

Operational information must be recorded and reported as required.

ACCEPTANCE CRITERIA

A report exists for every reporting period with no gaps, carries each required field, and reconciles to the underlying request logs for that period. A period with zero requests still produces a report rather than being omitted.

5. Control requirements — Part B: statutory money purchase illustrations

TM-01 Volatility measurement and group assignment

AS TM1 v5.2, section C.2

Fund volatility is computed from monthly returns over a five-year period and mapped to the volatility group that determines the accumulation rate.

ACCEPTANCE CRITERIA

The calculation consumes exactly sixty monthly observations. A fund measured at exactly 5.00, 10.00 or 15.00 per cent is assigned to the group indicated by the standard's band rule, and that assignment is stable across runs. A fund with fewer than sixty observations follows the documented fallback rather than silently using a shorter window.

TM-02 Accumulation rate by group

AS TM1 v5.2, section C.2

The accumulation rate applied is 2, 4, 6 or 7 per cent a year according to the volatility group.

ACCEPTANCE CRITERIA

A group 2 fund projects at 4 per cent. It must never project at 3 per cent, which was the superseded rate. A regression to any superseded rate is a failure even where the resulting figure looks plausible.

TM-03 Presentation in today's money

AS TM1 v5.2, sections B.3 and C.2

The projected fund is expressed in today's money by dividing the nominal amount by an inflation factor built at 2.5 per cent a year compound.

ACCEPTANCE CRITERIA

For a fixed set of inputs, the output matches an independently computed expected value to the rounding tolerance. The deflation is applied once; a figure deflated twice, or not at all, is detectable by comparison against the reference calculation.

TM-04 Contribution escalation

AS TM1 v5.2, section B.5

Future contributions escalate according to their basis: earnings-linked and inflation-linked amounts each at 2.5 per cent a year.

ACCEPTANCE CRITERIA

A member with earnings-linked contributions and a member with inflation-linked contributions, otherwise identical, produce the same projection. A member with contributions fixed in cash terms produces a lower projection, and no escalation is applied to that member.

TM-05 Charge assumption fallback

AS TM1 v5.2, section C.2

Where the actual charges are unknown, a default of 1 per cent a year of the projected fund applies.

ACCEPTANCE CRITERIA

A member record with no charge data produces a projection using the 1 per cent default, and the use of the fallback is recorded against the calculation. A silent fallback that leaves no trace is a failure, because the resulting figure cannot afterwards be distinguished from one based on real data.

TM-06 Annuity expense loading

AS TM1 v5.2, section C.3

An expense loading of 4 per cent is applied to the annuity value at retirement.

ACCEPTANCE CRITERIA

The annuitised figure is 96 per cent of the unloaded value, to the rounding tolerance, for every benefit shape the engine supports.

TM-07 Guaranteed annuity rate takes precedence where better

AS TM1 v5.2, section C.3

Where a member holds a guaranteed annuity rate that is more favourable than the standard basis, the illustration uses the guaranteed rate.

ACCEPTANCE CRITERIA

The engine performs the comparison and uses the higher of the two in every case. A member whose guarantee is worse than the standard basis receives the standard basis. The comparison result is recorded so that the choice can be evidenced afterwards.

TM-08 Output format and rounding

AS TM1 v5.2, sections B.2 and B.8

The illustration is expressed as an annual amount in whole pounds, rounded down to three significant figures.

ACCEPTANCE CRITERIA

A computed value of 12,349 is presented as 12,300 and never as 12,400 or 12,350. Rounding is downward, not to nearest. The figure is annual; a monthly figure presented without conversion is a failure.

TM-09 Effective-date switch between standard versions

Effective 6 April 2026

Calculations performed on or after 6 April 2026 use version 5.2; calculations performed before that date use the preceding version.

ACCEPTANCE CRITERIA

A calculation dated 5 April 2026 and one dated 6 April 2026, on identical inputs, resolve to the version applicable on their respective dates. The selection follows the calculation date, not the report date and not the system clock at the time of reprint. Reprinting an old illustration must reproduce the original figure.

TM-10 Annual issue within twelve months of scheme year end

SI 2013/2734 regulation 17 and Schedule 6

An illustration must be issued to every eligible member annually, within twelve months of the end of the scheme year.

ACCEPTANCE CRITERIA

No eligible member exceeds the twelve-month window. A member joining mid-year enters the cycle correctly. A member who has left but remains eligible is not dropped from the run.

TM-11 Reconciliation between the illustration and dashboard value data

Internal delivery standard; SI 2022/1220 regulation 26

The money purchase value shown on a dashboard and the value shown on the member's statutory illustration derive from the same calculation basis and must reconcile.

ACCEPTANCE CRITERIA

For the same member, the same effective date and the same fund position, the two figures agree to the rounding tolerance. A divergence is a defect in both the dashboards controls and the illustration controls, and is reported against both. This is the highest-value cross-regime assertion in this document.

6. Control requirements — Part C: record keeping and data quality

These controls derive from the General Code. As noted in section 2, they are delivery standards rather than statutory obligations, but a court or tribunal must take the Code into account when deciding whether a legal requirement has been met, and poor records surface directly as failures in Parts A and B.

GC-01 Annual data review

General Code, Administration — data monitoring and improvement

The need for a data review exercise must be assessed at least annually.

ACCEPTANCE CRITERIA

A review event exists for each scheme within each twelve-month period. A scheme whose most recent review is more than twelve months old raises an exception naming the scheme and the elapsed period.

GC-02 Separate scoring of common and scheme-specific data

General Code, Administration — data monitoring and improvement

A data review assesses the accuracy and completeness of common data and of scheme-specific data.

ACCEPTANCE CRITERIA

The review output carries two distinct measured scores, one for each class. A single combined score is a failure of this control, because it cannot distinguish a scheme with good identifying data and poor benefit data from its opposite.

GC-03 Data improvement plan on a failed review

General Code, Administration — data monitoring and improvement

Where a review identifies issues, a data improvement plan must be put in place.

ACCEPTANCE CRITERIA

A review recording failures creates a plan record with an owner and actions. The plan cannot be closed while open defects remain against it; an attempted close is refused with the count of outstanding items.

GC-04 Completeness of common data

General Code, Administration — record keeping; Occupational Pension Schemes (Scheme Administration) Regulations 1996 regulation 12

The data needed to identify a member uniquely must be present and correct.

ACCEPTANCE CRITERIA

Every active, deferred and pensioner record carries a non-null value in each common data field, or appears on an exception report. A record missing a common data field must not be silently excluded from either the exception report or the dashboards matching population.

GC-05 Transaction audit trail

General Code, Administration — record keeping

Contributions, investments, payments and transfers must be recorded completely and accurately.

ACCEPTANCE CRITERIA

Every transaction carries member, amount, date and counterparty. The record is append-only: a correction produces a new entry that references the original rather than overwriting it, and the original remains retrievable.

GC-06 Own risk assessment currency and coverage

General Code, The governing body — own risk assessment; Pensions Act 2004 section 249A

Schemes with 100 or more members operating an effective system of governance must carry out an own risk assessment, and repeat it at least every three years, as well as when elements of the system are new or updated or when risks change materially.

ACCEPTANCE CRITERIA

An assessment record exists per in-scope scheme, is dated, and covers each mandated domain. An assessment older than three years raises a breach flag. The first assessment due date is scheme-relative and must be computed from the scheme's own year end rather than from a fixed calendar date.

GC-07 The hundred-member threshold

General Code, own risk assessment; SI 2022/1220 exemption

The 100-member threshold determines both the own risk assessment obligation and the dashboards connection exemption.

ACCEPTANCE CRITERIA

A scheme at 99 members is outside both; at 100 it is inside both. Crossing the threshold in either direction updates the scheme's obligation set automatically and records the date of the change. A scheme that crossed the threshold mid-year is assessed on the basis the regulations specify, not on its current membership alone.

GC-08 Cyber controls and incident handling

General Code, Administration — IT systems, cyber controls

Access controls, incident detection and an incident response capability must be in place and exercised.

ACCEPTANCE CRITERIA

A simulated incident creates a log entry, escalates through the defined route, and produces a closure record. An exercise that detects but does not escalate fails this control.

7. Open items

Item	Question	Disposition
OI-01	The sub-paragraph numbering within regulations 23 and 26 of SI 2022/1220 for the trust-based regime.	Regulation numbers and headings verified. The mechanics stated in Part A are taken from the mirroring FCA rules and regulator guidance. Read the statutory instrument directly before external publication.
OI-02	The annuity shape prescribed at version 5.2: whether a guarantee period or spouse assumption applies.	Provider documents in circulation describe bases that differ from one another. Do not state a guarantee period or spouse assumption without reading section C.3 of the standard directly.
OI-03	The mortality projection model year in force at version 5.2, and the annuity interest rate set in February 2026.	Both are version-specific and were not confirmed. Neither is asserted in this document.
OI-04	Whether data quality scores are reported to the regulator through the scheme return.	Not confirmed either way. GC-02 requires the scores to exist and be separable; it does not assert a reporting obligation.
OI-05	The date of the Dashboards Available Point.	Not announced. Six months' notice is required. Express as a relative rule, never as a date.

8. Revision history

Version	Date	Change
1.0	8 January 2025	First issue ahead of the staged connection programme.
2.0	19 May 2025	Value data response windows added after the first cohort connected.
3.0	27 April 2026	Illustration controls rebased to version 5.2 of the standard.
4.0	3 August 2026	General Code controls incorporated. Cross-regime reconciliation control TM-11 added.
4.1	2 September 2026	Working-day and calendar-day boundaries separated after a defect found a single calendar applied to both.
4.2	25 September 2026	Connection deadline restated. Open items recorded against unverified statutory sub-paragraph numbering.

Cavendish Pension Services Ltd is a fictional administrator and this document is an illustrative example produced for demonstration purposes. It is not an official regulatory text, actuarial standard or code of practice, and must not be relied on for any compliance purpose. Regulatory positions compiled 25 September 2026 and not maintained thereafter.
